

ACFA PLUS LDB

Optimized Density. Superior workability.

Up to 20% lighter than standard Fiber Cement Boards (1400–1450 kg/m³) while maintaining excellent racking strength, impact durability, and screw withdrawal capacity — making it ideal for direct cladding, rain-screen sub-frames, and semi-exposed ceilings. ACFA PLUS LDB is not just a board — it's a system solution designed to outperform under real conditions. Made with high-quality virgin cellulose pulp and a proprietary cement formulation, ACFA PLUS LDB achieves exceptional strength, durability, and weather resistance without the extra weight.

Styled for Tomorrow. Engineered for Extremes

Lighter Yet Stronger

0% lighter than regular Fiber Cement Boards without compromising screw holding or impact strength.

Built for Harsh Conditions

Withstands 100+ freeze-thaw & wet-dry cycles (EN 12467 – Category A, Class 3).

Engineered Core

Cellulose fiber-reinforced cement with waterproof additive. strong, stable, and dimensionally consistent.

Fire. Water. Impact. Weather. Rated

A1 fire performance, H1 moisture resistance, and heavy-duty impact compliance (BS 5234).

System Partnership

Developed with Nextec for complete specification and system support.
